Smart
Reporting
System

Smart Reporting System

Escape static spreadsheets and upgrade your analytics to a dynamic platform with everything you need to validate your business decisions. Features our Easy-to-use, dynamic e-Form generator with a wide selection of customizable question types, support documents, media uploads, and geolocation records.
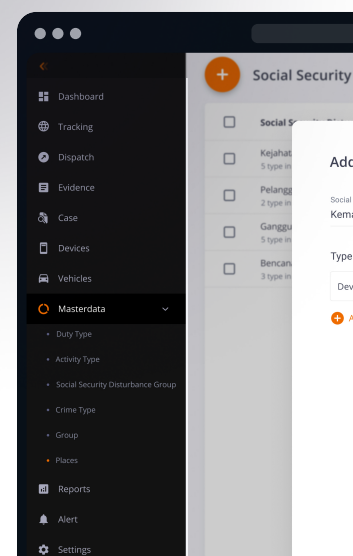

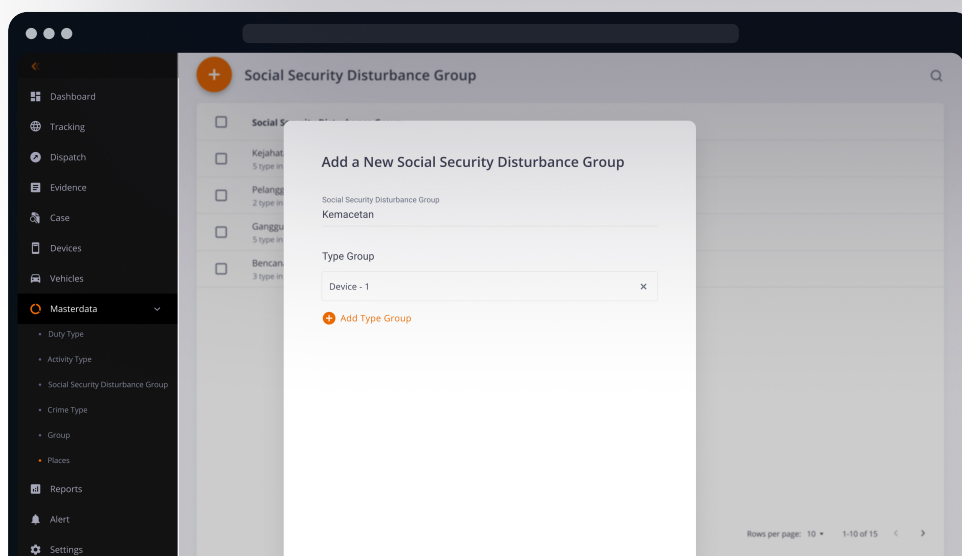

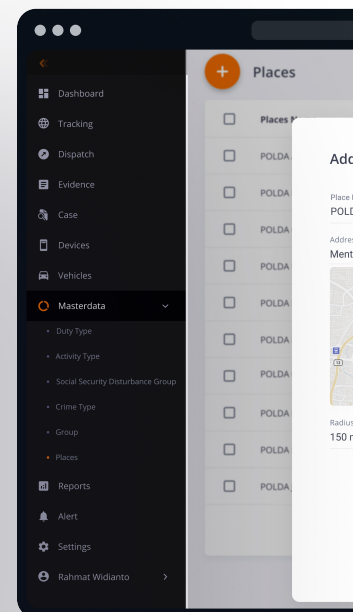

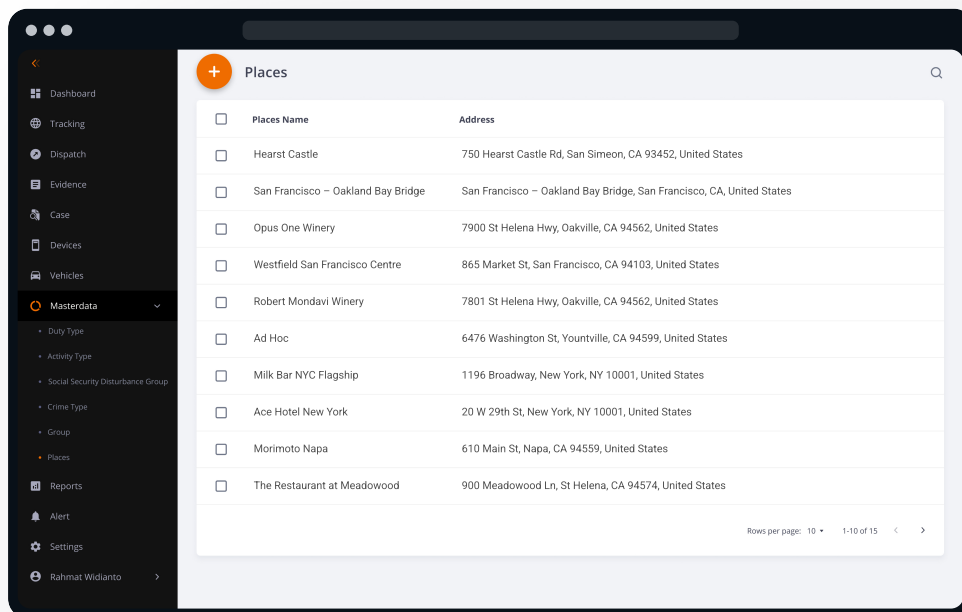

Module

Forms On-The-Fly

Including a generic document generator module enables you to transform your data collection streams to their most delicate details. Quickly retrieve accurate data, critical flag issues, reduce data entry error, and more.
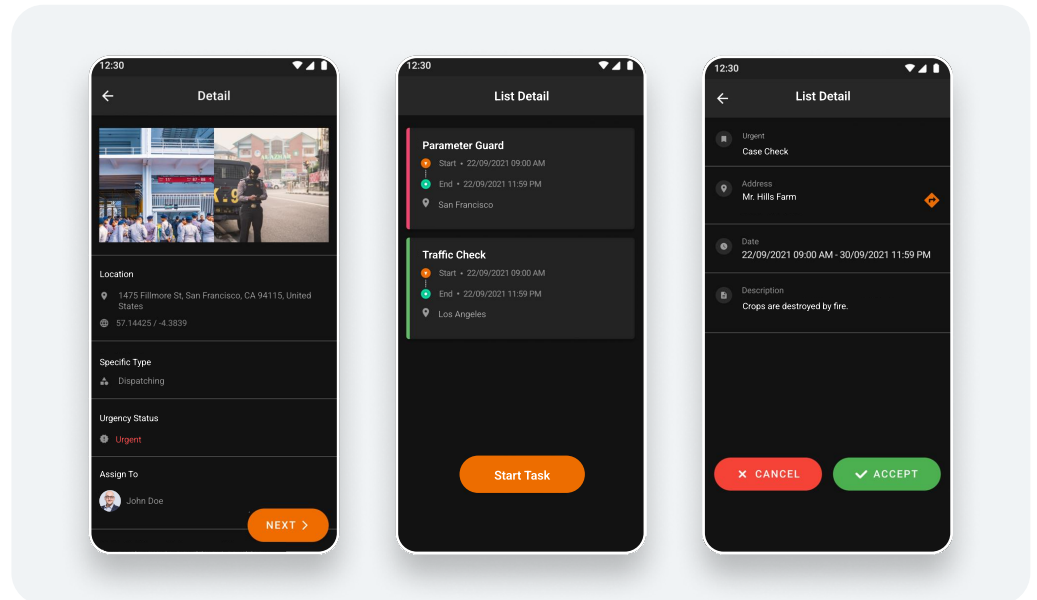

Rich Media Module

Seamlessly validates all the data input on the form, making all the inputs are well validated to reduce human error in inputting.

Submission Geotagging Module

Validate answers, add conditional logic, and deliver your data correctly. Information is provided from exactly where you need it.

Key Feature

Offline Access

Ability to work in offline mode is critical for front line workers to perform their daily jobs because they usually work in an area that has poor or no internet connectivity.

Intelligent Fields

Seamlessly validates all the data input on the form, making all the inputs are well validated to reduce human error in inputting.

Custom Template And Document Generator

Simple report generation. Create customized, intelligible reports to share evidence in a clear, easy-to-understand manner

Geo-Tagging

Tracking functionality tracks your staff's location whenever they clock in and out of work and records that location in their timecard. Any administrator can then login into the administrator platform to review all employee locations at the same time, and make sure everyone clocked in and out where they were supposed to.

Any Data, Any Device, Any Time,

Field Management System

Field Management System

Field service management typically involves dispatching workers or contractors outside company premises to install, maintain or repair equipment, systems, or assets. Field service managers keep track of an organization's field resources and coordinate the work of field service practitioners who deliver skilled, specialized, or proprietary services to clients.
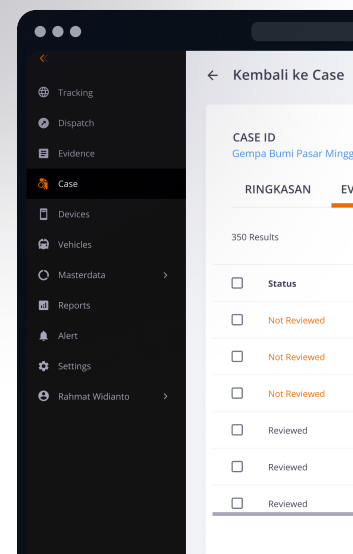

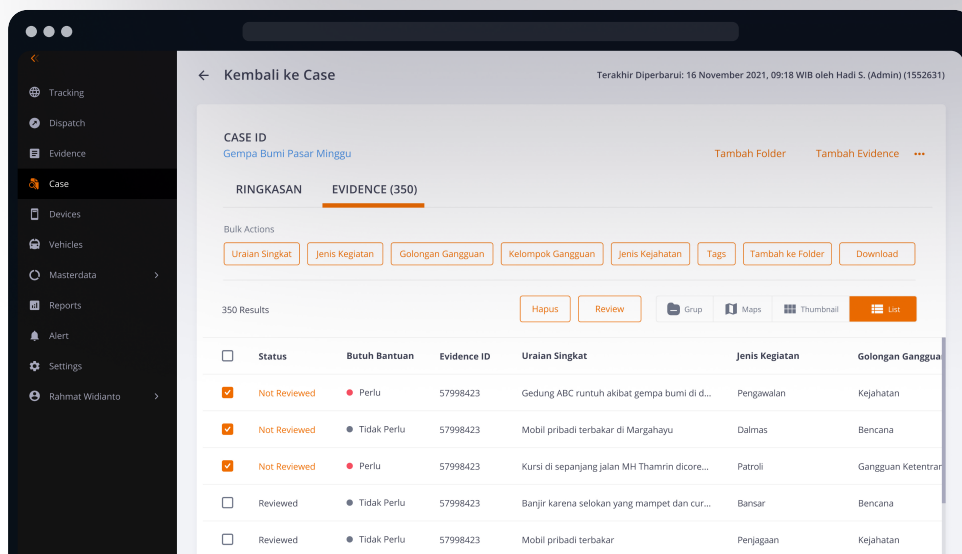

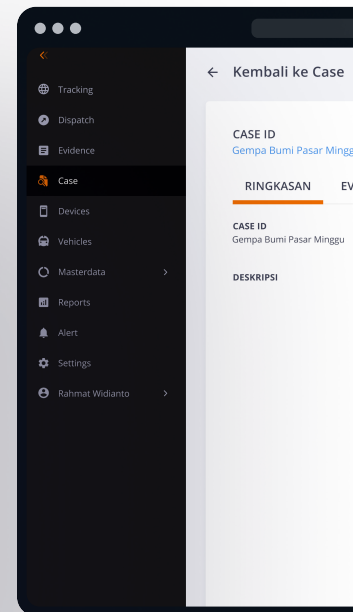

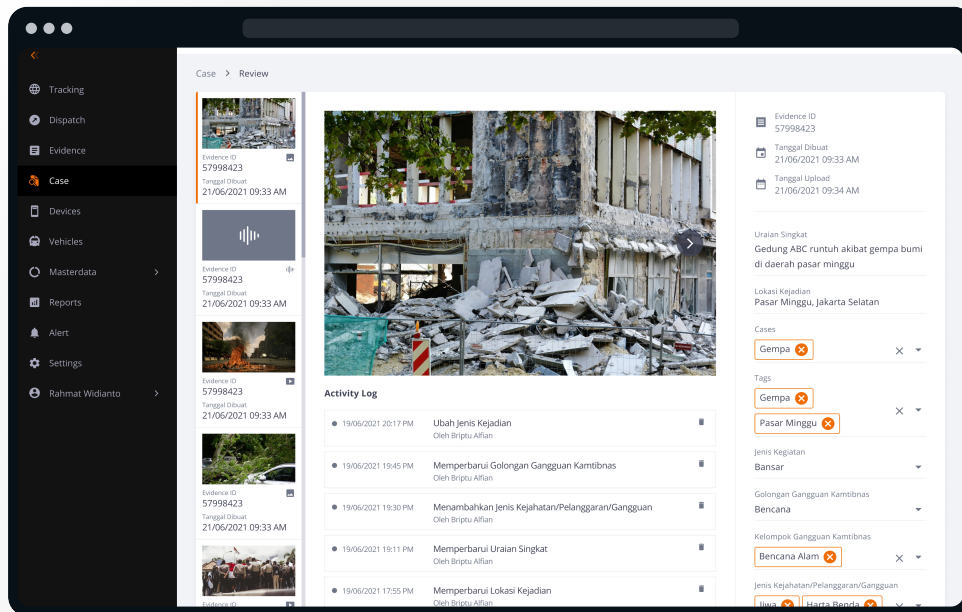

Module

Employee Time Tracking

Quickly validates any users that are inactive group users, making sure all the data that are collected are collected by a specific user—reducing errors in data reporting, creating a more secure data stream for everyone.

Digital Assignment

Send forms with pre-populated tasks to notify employees in the field of a new charge

Video-Sharing

Enables users to transmit a live video implies no delay at the receiving sides. Shares your videos to others with a simple command to designated users/ groups to create a more complicated situation handling in a highly flagged case.

Geofencing Module

Provides a better accuracy to monitor a group or a personnel movement into or out of a geographic location. A latitude/longitude pair of combination combines the awareness of the user's current location with the understanding off

Alerts And Reports Module

Automate workflows so that the submission of one form triggers another form to be dispatched.

Key Feature
Punch-In Tracking

Guarantee that employees are punching time for themselves completed with our deep-learning data analytics and device lock features for our online time clock Monitor who is making changes to their punch clock in real-time.

Task Transfer

You can organize task assignments and appraisal resources using set criteria provided by our field management system Dispatch. The dispatcher can then schedule and map the most efficient routes using flexible scheduling based on the work priorities and designated scenario constraints.

Rich Media Capabilities

Capture and record effortlessly. Snap photos with our mobile application. Complete our built-in forms or attach documentation anywhere on the platform.
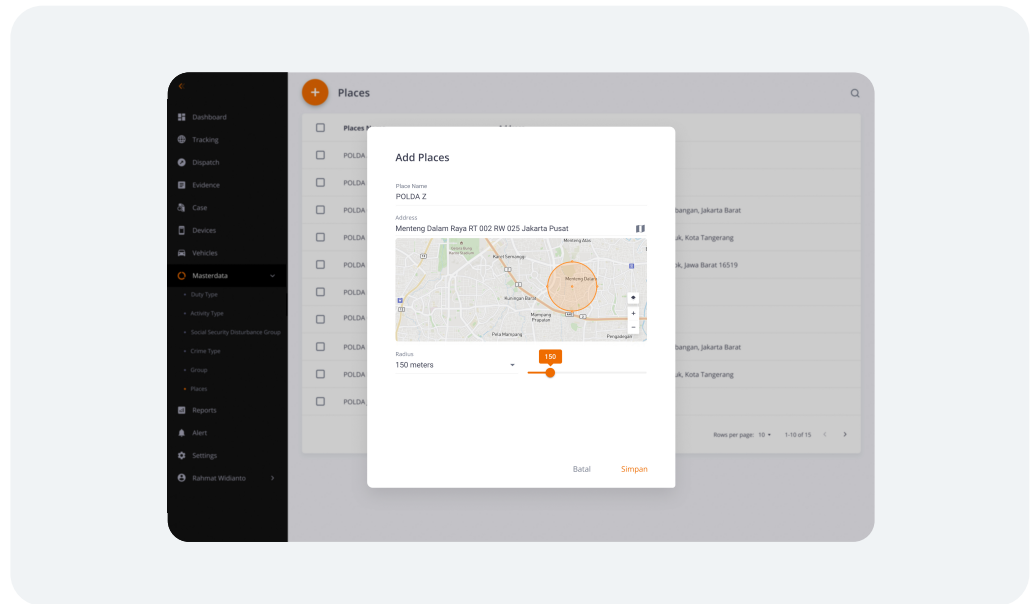

Real-Time Tracking

Harmonize office-to-field communication to track and enhance current field worker performance.

Places Management

Set a fencing area on the critical zone and quickly notify field management whenever the workers are getting in and out from the designated working site.

Advanced Telemetry

To track and see where all the company assets are located. A company could transform all the data into a timely manner dataset to distinguish a clear set of the report about how the assets move, daily, weekly, monthly, or anytime picker you would like to see
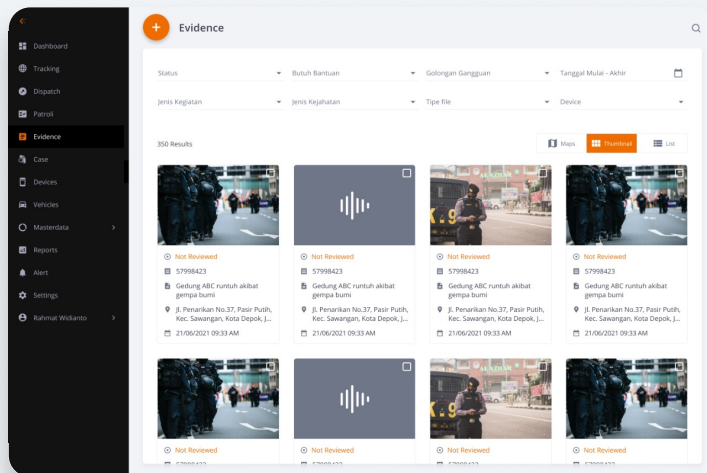

Dashboard Visualization

A data management tool that tracks, analyses, monitors, and visually displays key business metrics while allowing users to interact with data, enabling them to make well-informed, data-driven, and making a critical business decision at ease

Real-Time Notification

Real-time alerts from our field management system deliver real-time alerts from multiple systems to any device or system based upon clients' preferences.

Custom Report

A feature to generate various customizable form templates commonly used in day-to-day workflow processes

Integrated Dashboard Visualization

Integrated Dashboard Visualization

With our Integrated Dashboard Visualization, clients can visualize and analyze your data from within a modern reporting tool. The seamless integration of both systems guarantees you error-free transfer of all data you need to build a meaningful dashboard.

Choose from 100s of curated Instant Metrics—no coding required. Dig into our custom options to access and combine your data from every service you can think of.
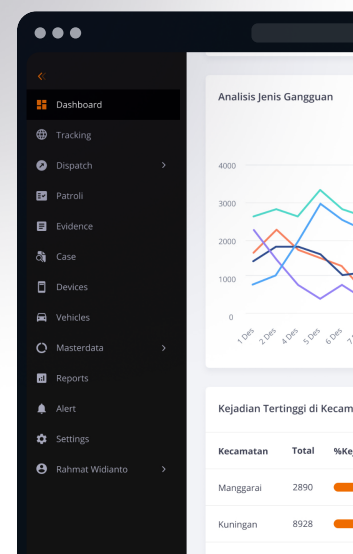

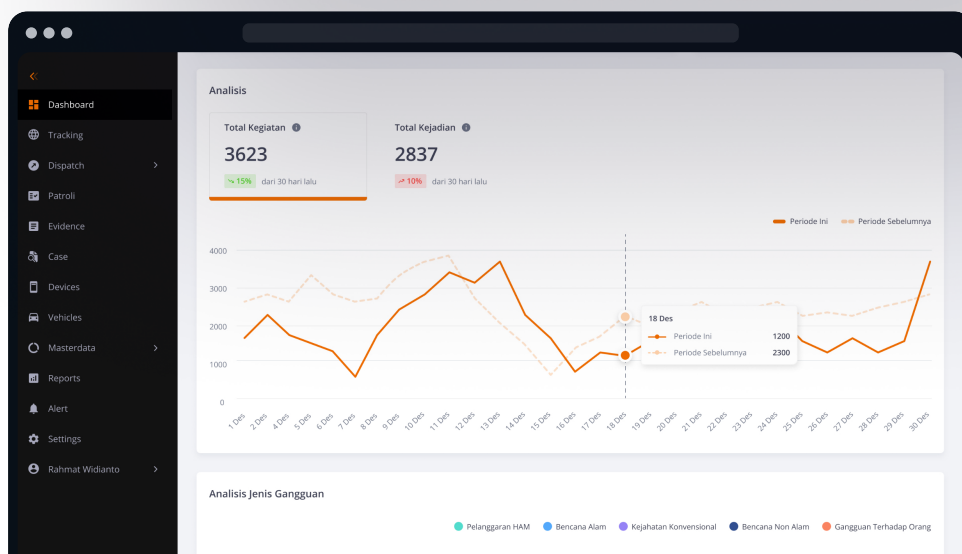

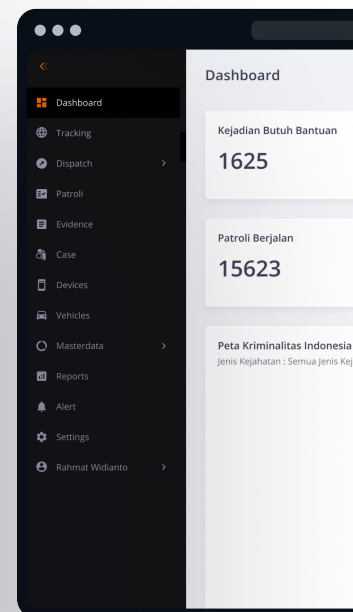

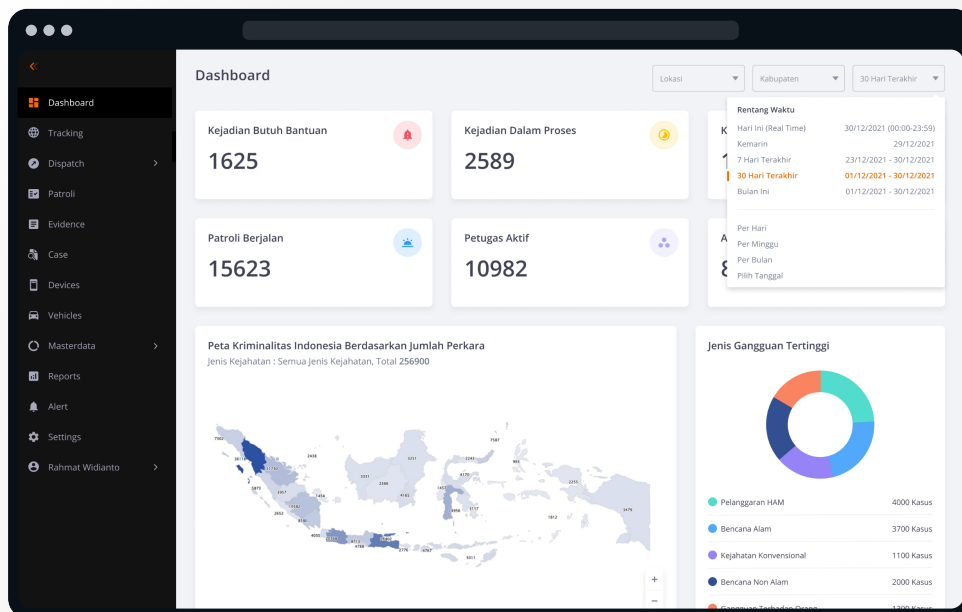

Module

Real-Time Data Monitoring

Real-time data monitoring can help with continuous data collection to be able to get the the most up-to-date and relevant data. This module is supported by a protocol that provides a full-duplex communication channel over a single TCP connection

Load Balancer

Load balancer module can manage traffic routing based on load. Load balancer will choose to route to the less loaded destination.

User & Roles Module

Decide which device can access which forms, so everyone has what they need, and nothing they don't. Share new forms across all devices or choose which device to make them available.

Dashboard Visualization

Visualization Dashboard displays data with insightful graphic with the aim of helping to make decisions fast and accurately. This module provides tools such as filter and sorter to get more specific data.

Data Logger

Data logger is an API Module to serve data logging activities from integrated applications to immutable distributed ledger.

Immutable Distributed Ledger

Immutable distributed ledger are inherently resistant to modification of any stored data. Functionally, this technology can serve as a ledger that can record transactions in a verifiable and permanent way. This powerful ledger can be used as a source of verification for reported transactions

Key Feature
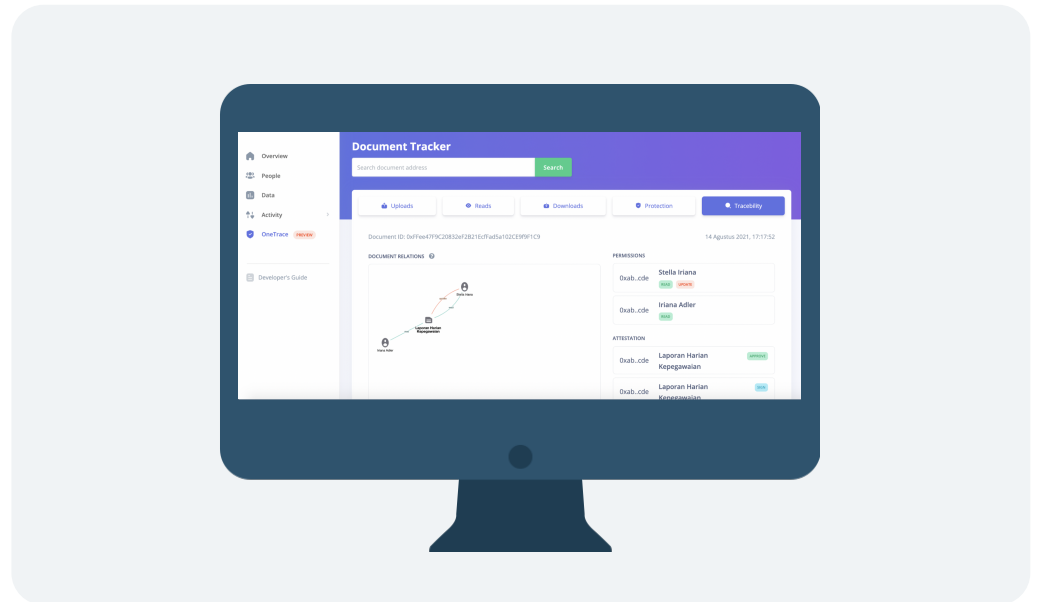

Real Time Data Monitoring

Constantly delivers a stream of updated information at zero or low latency.

User Level Management

Various and multiple user access to different screen and different task, based on user level clearance.

Dashboard Visualization

Our state-of-art dashboard visualization, helps any user digest the data insights that you need to see.

On-The-Field Report Master Data

List of master data reports from all the fields, on your screen directly from the workers device.

Proof Of Authority

Using a ledger technology, we are able to identify a specific document status whether it's been changed or transferred to any unauthorized users.

Document Traceability

Next-Gen document traceability enables users to track a specific documents distribution.

Tamper Proof Data

Data manipulation can happen all the time. We help you to prevent the manipulation by expose any attempt to change the data in the platform, by giving a resourceful detail about the data.

Data Accountability

Through our distributed ledger technology, rest assured all the data in your dashboard are all accountable, directly from any inputs to your customized datasets.

Distributed Ledger

Our highly rated ledger system, where all the data stored in this system are immutable.
